# Crafting Your Innovative Network Infrastructure

Think about the software you use on your company desktop computer on a day to day basis. Maybe it's Quickbooks, SAP, Microsoft Word, Outlook, etc. All of these programs are connected to your company's main server by cables, switches, routers, or wireless access points.

All of these components make up your network infrastructure. Think of it as the roads that connect your computers together. Now imagine these roads being designed incorrectly. For instance, a major 6-lane highway in front of a remote residential area. Or a single lane dirt road connecting a busy city.

Much like a badly constructed road layout, a poorly designed network infrastructure can lead to congestion, confusion, and complete chaos.

By re-designing your network infrastructure around your company's objectives and business goals, you can access the resources you need quickly and easily.

Much like a badly constructed road layout,  
a poorly designed network infrastructure  
can lead to congestion, confusion, and  
complete chaos

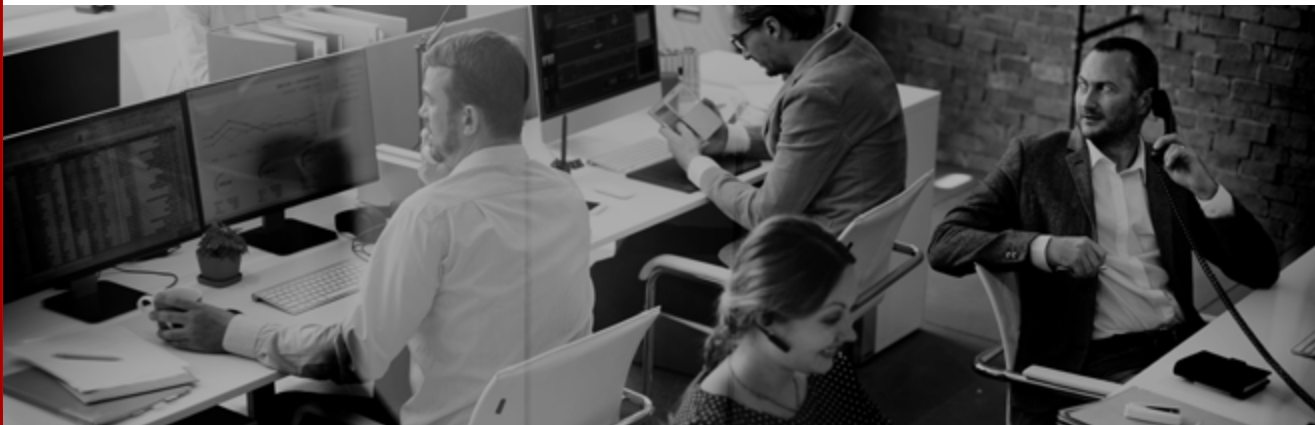

# What Do You Want out of Your Network Infrastructure?

When you think about your network infrastructure, what are some of the features you'd like to gain from it? For instance, do you want employees to have secure remote access to company resources and applications? Do you want to improve your wireless service to integrate new policies like BYOD (bring your own device)?

If so, it's important to know and identify the main objectives you want your network to support.

At IPRO, we specialize in designing the right infrastructure for your unique needs and challenge. We're certified in:

- Indoor and outdoor wireless
- Structured cabling
- Security
- Backup and disaster recovery
- And much more!

# Enable Better Business with a Custom Network Infrastructure

According to [AdWeek](#), 90% of businesses unexpectedly lose access to their critical systems, and 1/3 of businesses deal with downtime every month.

When you partner with IPRO, you gain a single point of contact for all your infrastructure services and billing. We'll also come in with a full network assessment to identify existing issues, implement necessary upgrades, combat downtime, and strategically plan for the future.

## Maintain Compliance

We'll help your company establish policies and ensure systems are standardized and within regulatory guidelines. Then we'll follow up with 24/7 network monitoring to keep you in compliance at all times.

unexpectedly lose access to  
their critical systems**

## Enhanced Wireless Capabilities

Improve your wireless network with Ruckus Wireless Service. By enabling the smartest and simplest wireless solution for your increasingly mobile business, you can reap the benefits of enhanced connectivity and engagement.

## Manage Incoming Data

Streamline data sharing and traffic with managed and unmanaged switching. We'll monitor the status of connections and provide insight on data traffic to minimize network downtime and boost security.

## Responsive Network Support – Always

Your network infrastructure doesn't have to be complex or expensive. It should work for your unique needs, reduce redundancy, and provide for a more efficient work environment so you can get back to doing what you do best – running your company. [Let's have a conversation.](#)
